

# Mail2SMS

Send SMS or MMS from your e-mail

## ***The Mail2SMS service is customizable based on different needs.***

Send SMS or MMS from your regular email account. When an e-mail message is sent to the e-mail address assigned for Mail2SMS, the message is forwarded as SMS to the recipients whose mobile numbers are specified separated by semicolons in the subject field.

Mail2SMS also offers the possibility for MMS sending in the form of picture, audio or video to Swedish recipients directly from your e-mail client.

An SMS contains 160 characters. You can choose to send up to 20 SMS parts, which corresponds to about 3060 characters, which are delivered and displayed as a single long SMS on the mobile phone. You can control how many SMS to use in the service control panel.

One or more Mail2SMS addresses with unique settings can be linked to the same debit account.

***Mail2SMS creates the opportunity to fast and easy forward text messages to cell phones.***

## **Features**

- Forward emails in the form of SMS up to 3060 characters (20 SMS)
- Send picture message audio, picture or video as MMS to customers and employees (300 kb)
- Selectable sender, alphanumeric with 3-11 characters a-z or numeric with up to 15 digits 0-9
- Enter cell phone number in the field or set recipients in Mail2SMS settings
- Attach a file with up to 10,000 recipient numbers to receive the SMS / MMS
- Mail2SMS sends SMS / MMS to recipients when the associated address receives e-mail
- Only accept SMS / MMS sent from certain domains and / or email addresses
- Ability to block SMS sending to the mobile during night time and choose to buffer these to a later selectable time (not MMS)
- Recipients and messages variables
- Support for Unicode eg. Emoji

If the basic settings do not meet the needs, SMS Teknik can offer "**Advanced Mail2SMS**", for example with a unique domain that offers to enter the recipient number directly in the e-mail address. Do not hesitate to ask for a solution.
