# SMS Gateway

Integrate SMS-functionality in your system or application

Do you wish to send SMS from your own system/application? Our powerful SMS Gateway gives you multiple opportunities to get SMS functionality in your existing systems.

Our SMS Gateway can be used through protocols SMPP, UCP, CIMD2, HTTP/S and SMTP to send SMS. The delivery to us can be made with XML or variables. We also have the possibility to communicate with HTTP/S GET/POST.

Send SMS with offers to customers, reminder of appointments, confirmation of order or other information to contacts directly from your system.

SMS Teknik has API´s and code snippets for easy integration into systems, but also cooperating with system suppliers such as SoftOne, Winserv, Garp, Pengvin, SharePoint, Techotel etc.

> *SMS Gateway is a good choice for business systems, CRM systems, planning, financial systems or booking systems*

Following functions is found in SMS Gateway:

• Multi part SMS
• Delivery report for every sent SMS
• Flash
• Send later
• Optional Sender, alphanumeric or numeric
• Custom ID
• Encryption and SSL
• VPN
• Webservice

There is an additional module for SMS Gateway which makes it possible to get answers to sent SMS.

There is an additional module for SMS Gateway which makes it possible to get answers to sent SMS. The module works totally dynamic and keeps track on which answer is connected to which SMS. Contact SMS Teknik for more information and price.
